

SILMATIC

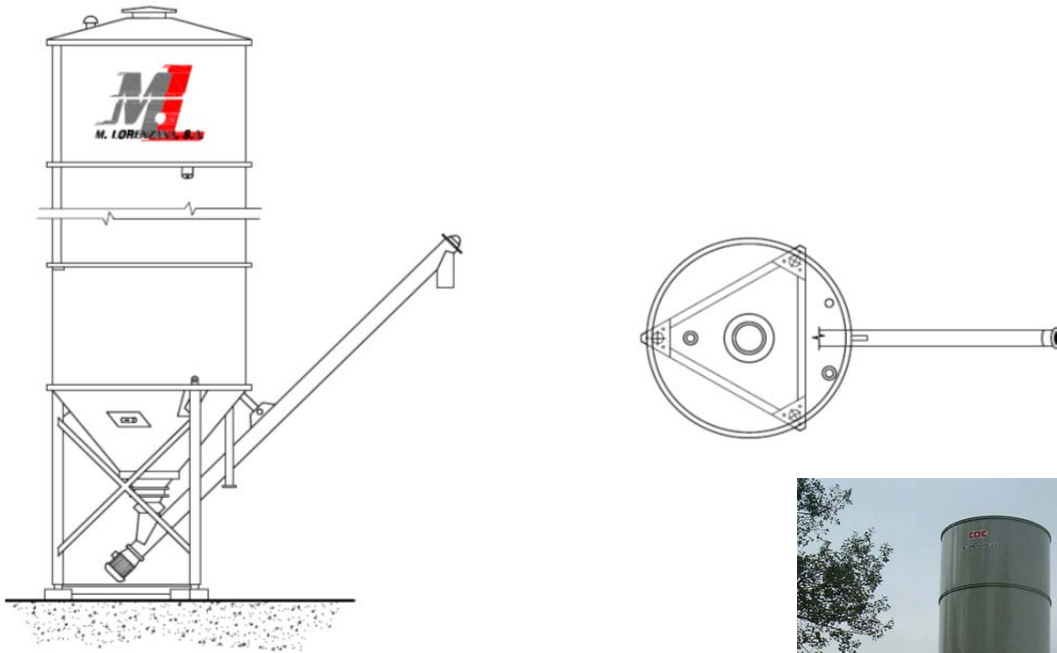

The monoblock silos **SILMATiC** stem from traditional silos, sharing the same shape and dimensions. The difference is their three legs and the Support base for the instrument of automatic control.

Together with our portable concrete plant and our self-loading concrete mixers they make up a semi-portable plant for producing concrete in the place and moment you need

The electronic weighing system with digital panel, and controlled by automatic programs, allows us to discharge the pre-selected amount of cement, as well as showing the total amount of cement remaining in the silo or the amount that we introduced in it.

The 99-recipes-memory allows us to schedule the suitable amount of cement for each mixture, depending on the type of concrete resistance that we need, or allows us the schedule for different mixers' capacities.

All silos can be equipped with an additional device for allowing the discharge of materials scheduled by timer.

Optionals:

- Dust collector filter.
- Remote control.
- Fluidization system
